www.linkedin.com/in/syumairaazhar/ • myportfolio.kidhome.work/

Computer Science graduate with expertise in network infrastructure design, Linux administration, and full-stack web development. Proficient in PHP, JavaScript, Python, and MySQL, with a focus on optimizing system performance and troubleshooting complex issues. Seeking to leverage technical skills in Network Engineering, IT Infrastructure, or Systems Administration roles.

PROFESSIONAL EXPERIENCE

HQ Perbadanan Kemajuan Negeri Selangor (PKNS)

Oct 2024 – Present
Shah Alam, Selangor

IT Support Specialist (Internship)

- Optimized enterprise network infrastructure by designing and deploying VLAN segmentation, enhancing network security and scalability for 100+ users across HQ operations and branch offices.
- Architected high-availability connectivity protocols and implemented proactive network monitoring to maintain 99.9% uptime for critical business services and daily operations.
- Collaborated on multi-phase infrastructure upgrade projects, technical evaluation of vendor proposals, and drafting comprehensive tender documentation for high-level procurement.
- Performed initial troubleshooting for network connectivity and configuration incidents, escalating complex issues to higher support tiers when required.
- Modernized front-end responsiveness of the PKNS landing page using HTML, CSS, and Bootstrap, improving accessibility and user engagement for public-facing digital assets.

AIM Connections Sdn Bhd

March 2021 – July 2021
Damansara, Selangor

IT Technician (Internship)

- Administered the Passenger Information System (PIS) web application, ensuring 24/7 service availability through automated security audits and routine software patching.
- Configured and deployed managed network switches to reinforce infrastructure reliability and throughput for real-time transportation data delivery.
- Mitigated critical system downtime in a live transportation environment through rapid on-site hardware maintenance and deep-dive technical troubleshooting.

EDUCATION

UNIVERSITI TEKNIKAL MALAYSIA MELAKA (UTEM), MELAKA, BACHELOR'S DEGREE IN COMPUTER SCIENCE (Computer Networking)

2021 – 2025

- CGPA: 3.49

POLITEKNIK UNGKU OMAR (PUO), IPOH, DIPLOMA IN INFORMATION TECHNOLOGY

2018 – 2021

- CGPA: 3.90

PROJECTS

Enterprise Network Infrastructure Simulation

Academic Project (Network Engineering)

Architected a complex, segmented enterprise network environment to simulate production-grade communication and identity management.

- Designed a scalable enterprise architecture using Cisco routers and switches, implementing Inter-VLAN routing to optimize cross-departmental traffic flow and security segmentation.
- Deployed centralized network services including Active Directory for identity management, alongside DNS, DHCP, TFTP, and other services to mimic corporate infrastructure standards.
- Conducted rigorous network validation and performance testing within a virtualized environment to ensure high availability and protocol integrity.

Job Tracking System and Portfolio System (Home-Lab)

Personal Project (Infrastructure & Development)

Developed and deployed a containerized CRUD application for career workflow automation, hosted on a custom-built home lab infrastructure.

- Built and managed a Proxmox VE home lab running Ubuntu Server for self-hosted services.
- Deployed a containerized full-stack application using Docker and Docker Compose.
- Developed a PHP and SQLite back-end for efficient data storage and retrieval.
- Published a self-hosted portfolio website using Cloudflare Tunnel, custom domain, DNS, and HTTPS for secure remote access.
- Developed Telegram API integrations to automate notifications for job applications, interview invitations, assessments, and upcoming deadlines.

Smart Automated Gate System (IoT)

Final Year Project - UTeM

Designed and developed an IoT-based vehicle access control system with computer vision.

- Developed license plate recognition (LPR) pipelines using Python and OpenCV to automate real-time vehicle verification and access security.
- Architected a MySQL and PHP back-end to manage vehicle registration data and maintain comprehensive access logs for audit trails.
- Integrated Raspberry Pi hardware with Linux-based software stacks to create a functional end-to-end security solution for gated environments.

Secure Portable Media Server (NAS)

Final Year Project - PUO

Built a secure Network Attached Storage (NAS) solution for encrypted file management and media delivery.

- Hardened Debian Linux by implementing user authentication, access controls, and secure Samba file sharing.
- Configured and optimized wireless infrastructure protocols to deliver low-latency media streaming across localized networks.
- Managed OS hardening, service deployment, troubleshooting, and availability testing.

Bus Ticketing System

Academic Project

Developed a terminal-based booking system using Object-Oriented Programming (OOP) and MySQL.

- Designed relational MySQL database schemas supporting ACID-compliant transactions to maintain data integrity for ticket registration.
- Leveraged C++ Object-Oriented Programming (OOP) to build modular, maintainable software for real-time business workflow reporting.

SKILLS

Network Engineering: TCP/IP, VLAN, Routing, LAN, WAN, DNS, DHCP, Cisco IOS, Network Troubleshooting & Infrastructure Support

Operating Systems & Virtualization: Linux Administration, Windows Administration, Docker, Virtualization, Proxmox VE

Databases & Back-end: MySQL, PHP, Python, RESTful API, Relational Database Design, Samba

Front-end Development: HTML, CSS, JavaScript, Bootstrap, Web Development

Development Tools: Git, GitHub

Identity Management: Active Directory

Networking Protocols: Inter-VLAN Routing

Language: Malay and English
